

## **How much is too much?**

### **The one-new-idea constraint and related phenomena at the information-intonation interface**

Deadline for Abstracts: 15th March 2024

Acceptance Notification: 05 April 2024

This workshop invites contributions researching the packaging of information relative to intonation units. Seminal studies including Chafe (1979, 1994), Givón (1983), and Pawley & Syder (1983) have suggested universal cognitive constraints on how much new information may be expressed in a prosodic chunk, e.g. Chafe's "one new idea constraint". Despite their wide-reaching implications, and their impact on fields including discourse analysis, psycholinguistics, and typology, these claims still largely await testing for more languages as well as discourse types.

This workshop aims to bring together researchers empirically testing the one-new-idea constraint and related topics at the information-intonation interface. This may include research on information packaging in prosodic units other than the intonation unit or on types of information that have received less attention in the literature. We particularly welcome contributions on lesser studied languages in an effort to probe the claimed universality of the proposed constraints. We also welcome diverse methodological approaches including, but not limited to, corpus-linguistic, experimental, discourse-analytic or interactional-linguistic approaches.

Invited researchers include Nikolaus Himmelmann (Cologne), Pavel Ozerov (Innsbruck) and Stefan Schnell (Zurich).

Date: 12th-13th July 2024

Location: University of Freiburg, Germany

Organizers: Uta Reinöhl, Naomi Peck

Please submit your abstract by 15th of March 2024 to: [naomi.peck@linguistik.uni-freiburg.de](mailto:naomi.peck@linguistik.uni-freiburg.de)
